# Happy Guys Software

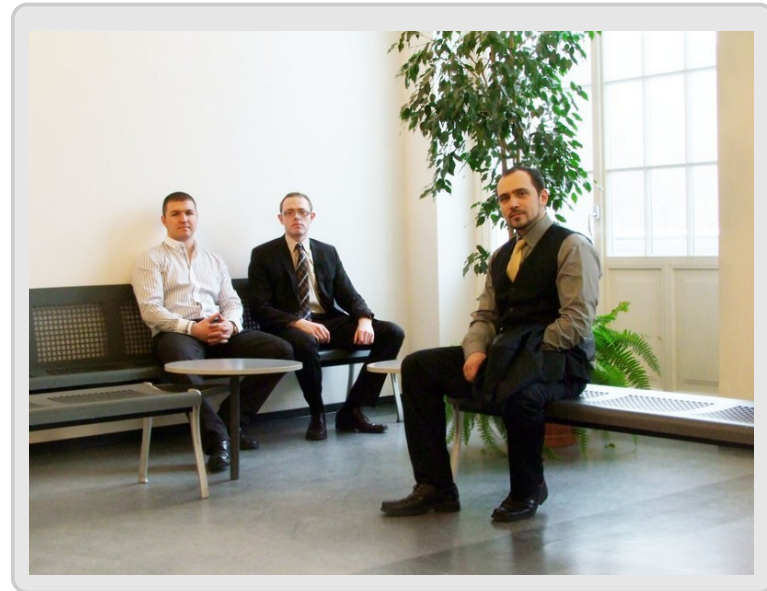

We improve the computing performance and provide semantic data management solutions!

# Agenda

2

- Enterprise
- Services
- Research & Innovation
- Research Projects
- References
- Contact

# Enterprise

3

- **Active:** Since March 2008
- **Location:** Dresden / Germany
- **Team:**
  - I. Klein (Economist, CEO)
  - A. Hollmann (Computer Scientist)
  - E. Lofing (Computer Scientist)
- **Sponsoring:** EXIST-Gründerstipendium von BMWi, Seed-Stipendium von Europäischen Union und Freistaat Sachsen.

# Services

4

- Tailor-made data management solutions by using of **semantic web** technologies (especially facette based classification).
- Development of multi-thread applications.
- Using technologies: J2SE/J2EE, Jena, RDF, ...

At present we develop a semantic *Semantic Desktop Application (Happy-Desktop)*:

- It connects several management tools and technologies like facette-based data management, text retrieval, classical file system, SQL-Requests, etc...
- It also manages data from different applications in a universal and intuitive graphic user interface.

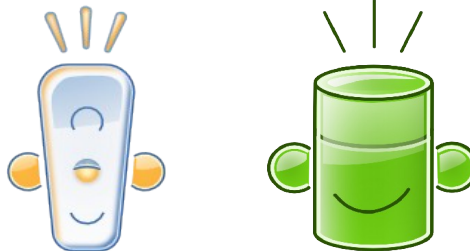

# Research projects

6

- **Multi-Isolation** is a Java framework, which uses a complex scientific concept and automatizes and simplifies the development of multi-thread programs.
- **Facet-DB** is a facette based data base, which can represent saved data of several kind as OWL. It's main goal is a great performance. It can therefore manage big semantic networks.

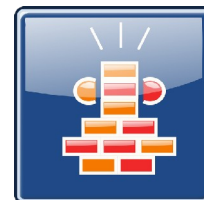

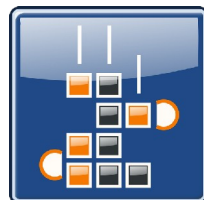

# References

7

- Our professional competence can be measured by our Open Source libraries.
- At present two software libraries are published, which make the programming of multi-thread software easier and make handling of Java-Collection classes more flexible.
